

Building a Modern Website for Fazeel AI Solutions

Project Overview:

Fazeel AI Solutions needs a modern, interactive website built with Next.js. The site will serve as an informational hub (showcasing AI services and the founder's profile) and a lead-generation platform (blog, contact forms, scheduling).

Tech Stack:

- Next.js 13+ (React) for hybrid rendering and SEO.
- TypeScript for maintainability.
- Tailwind CSS for responsive UI.
- shadcn/ui + Radix UI for modern components.
- Framer Motion for animations and transitions.
- MDX or Sanity CMS for blog and content management.
- Vercel for deployment, scaling, and global CDN.

UI/UX Design:

- Clean, minimal, responsive design with Tailwind.
- Interactive components via shadcn/ui.
- Motion design with Framer Motion.
- Option for dark mode and vibrant branding.
- Visual consistency with typography and icons.

Content Management:

- MDX for code-based blogs with interactivity.
- Sanity CMS for scalable, non-developer-friendly content management.
- Blog features: categories, tags, SEO-ready pages, live previews.

Key Sections:

- AI Services (LLM/SLM development, training, fine-tuning).
- Founder's Profile (bio, projects, publications, achievements).
- Blog (NLP, AI updates, case studies).
- Contact/Lead Gen (forms, Calendly scheduling, CTAs).

Deployment:

- Vercel with continuous deployment, edge caching, and environment management.

Examples & Inspiration:

- Cohere, OpenAI, Labelbox – clean, animated, content-rich AI sites.
- Next.js showcase templates for faster setup.
